An update to **SimplyWiki**, a module that adds wiki capabilities to your ImpressCMS and XOOPS websites, was released today. SimplyWiki 1.1.1 was released as a final version, bringing it into compatibility with new blocks administration functions introduced by [ImpressCMS 1.2](#) and fixing a few bugs in the 1.1 version.

What you'll like about 1.1.1 Manage all the blocks from the module's administration page New blocks: Tags, Top Tags (can only be used if the Tag module is installed) New block: Add Page - can be placed anywhere on your site to add a new wiki page. The block only displays if the user has write privileges in the wiki New Quick Add field added - similar to the Add Page block, but displays on the the wiki page, if enabled New block: Page List - options to list by create date, modified date, last viewed date or number of revisions, different display modes and customizable date format CAPTCHA added to edit form along with a config option to enable/disable Can select any page to be the top page for the module Summary can be entered for each revision New page information - creator, create date, views, last viewed, revisions (count), summary - can be displayed on all pages. Configuration allows you select which information displays New database structure for improved performance and greater flexibility **Getting the new version** You can download the new version as a .zip or tar.gz package [SimplyWiki 1.1.1 Final zip file](#) [SimplyWiki 1.1.1 Final tar.gz file](#) There are other packages (updates from 1.1) available for [download from SourceForge](#)
