SimplyWiki 1.1, based on Wiwimod - a WYSIWYG wiki module for ImpressCMS and XOOPS, has now reached RC (release candidate) status and updated packages are ready for you to download. Beta testing has progressed well and only a few fixes are in this release - Date display in admin area for other date formats Moved all date formatting to output and not in data retrieval Global notification event was not being triggered Index tags need absolute URLs (IndexPage and RecentChanges)

Other new features available in 1.1 - CAPTCHA added to edit form and config option to enable/disable - borrowed code from imLinks (mcdonald3072) New block: Page List - options to list by create date, modified date, last viewed date or number of revisions, different display modes and customizable date format New block: Add Page - can be placed anywhere on your site to add a new wiki page. Block only displays if the user has write privileges in the wiki New blocks: Tag Cloud and Top Tags (can only be used if the Tag module is installed) 'Add New Page' field to easily create new pages - user must have write privileges for the form to display Revision summary can be entered for each page revision Summary information to RecentChanges rendering, also available in History view Config option to enable/disable Quick Add Configuration option to select the top page for the module Configuration option to select which page information to display **Links to download packages** -
