3 months after the [release of ImpressCMSÂ 1.2](#), the ImpressCMSÂ developers have [released 1.2.1 Final](#). This release addresses several issues discovered as users began upgrading their existing sites. This is the 35th release from the ImpressCMS project in just over 2 years. 41 issues were fixed in this release, the majority of which focused on the upgrade of existing sites. The other fixes were related to new features added in 1.2 Issues were resolved in these areas - Control Panel Core Functionalities Design & Templates Installation Process Registration Process Upgrade Process

With the release of 1.2.1, IÂ am able to confidently recommend upgrading your previous versions of ImpressCMS and do strongly suggest you do so. More information can be found in their [release announcement](#) and in their [changelog](#).
