An updated and improved version of the WYSIWYG wiki module, **SimplyWiki**, is now ready for downloading, testing and translating. SimplyWiki, still compatible with both XOOPS and ImpressCMS, has been going through some refinements over the past year to improve its speed and performance, along with adding a few new features.

What's New in 1.2 3 new tags have been introduced , and   RSS feeds   Global notification options - any new page, any page modified, any page deleted, any page restored   New event for notification - page restored   When previewing a page, any tags or summary you have entered will be preserved   Improved page performance and fewer database queries Download the Latest Release SimplyWiki 1.2 RC zip file SimplyWiki 1.2.
