

Summary

piCal is an independent phpcalendar class.

piCal is also a powerful calendar module for XOOPS and ImpressCMS. This module can generate iCalendar data dynamically, and can import via http or from a local file.

piCal can function as a group or personal calendar, allowing you to assign events to categories and each category can have different viewing and access permissions. All of the basic calendar functions are available - creating individual events, all day events and recurring events.

Requirements

ImpressCMS 1.0+ or XOOPS 2.0+
